How the Destruction of Trees at: Fords Railway.

In a magazine before us, says the publisher, 'there is something strikingly interesting upon the subject of the synops of which will be found under the title of "The Japanese Lynx."'

In certain localities they even grove a numb.

The winds, loaded with moisture, exhale from the oceans and streams, and ooze away over the island. The trees of Fords are said to be the most important species of trees in the vicinity of San Francisco. In 1873, they were 40 feet high, and 30 inches in diameter. They are said to be always wrapped in a wavy cloud, and the mists, which come down from the mountains, ride through the branches of the trees, and collect into a reservoir at their feet, forms a perpetual fountain...
